buildings with concrete tilt-up panels are a very common form of industrial building in New Zealand and Australia. The parallel steel portal frames are the major framing elements which support the roof of long-run corrugated steel sheeting attached to cold-rolled steel purlins spanning between the portal frames.

Elastic Design of Single-Span Steel Portal Frame Buildings to Eurocode provides design formulae for steel portal frames. It advises that to determine approximate bending stresses in a steel portal frame, the following formulae can be used:

$$M_E = wL^2(3+5m)/16N \text{ and}$$

$M_A = wL^2/8 + mM_E$ M_E is the bending moment in the eave joints of the steel portal frame
