Optical-fiber-based telecommunication networks have become a major information-transmission-system, with high capacity links encircling the globe in both terrestrial and undersea installations. Numerous passive and active optical devices within these links perform complex transmission and networking functions in the optical domain, such as signal amplification, r

This is definitely a system's level approach to optical fiber. Essentially it provides you with the minimum motivation for modern optical fiber communication systems. It is also disjoint and relatively dry. My copy had Chapter 4 printed twice (extra paper). I'm not sure if there are better alternatives.
